

**FRANK GOMEZ**

Chemistry Professor

I am a scientist who understands the global challenges we face from long-term droughts, wildfires, and climate change. I am also a seasoned policy professional who served as a school board and city council member, and mayor – and for over 25 years as a professor of chemistry and administrator leading STEM initiatives at the California State University chancellor's office. These roles provided the experience to make sound finance and technical policy decisions.

As director of the Municipal Water District of Orange County (MWDOC), I will advocate for:

Transparency in planning for climate change challenges of reliable water supply imports.

Fair distribution and sustainable supply of safe and clean water for all of Orange County.

My PhD is from UCLA. I was a postdoc at Harvard University. As a chemistry professor, I work on a wide swath of environmental issues regarding the nexus of water, energy, and urban sustainability. I have taught and mentored hundreds of students. My family has lived in Tustin for over 20 years.

Elect a scientist to protect your water supplies. Water is a scarce resource that everyone should be able to share.
