MAKSIM V EGOROV
Software Engineer/Businessowner

I am blessed and proud to call Irvine home. My passion for protecting Irvine's open space, serving every resident, and planning responsibly for the future inspired me to run for Mayor.

As a software engineer, I have built my career solving problems, improving quality, and delivering results. I will bring a practical, transparent, and accountable approach to City Hall.

I serve on my neighborhood HOA Board and have volunteered on the School Site Council and English Learner Advisory Committee (ELAC) at my children's Irvine school. These experiences have strengthened my belief that the best decisions come from listening and working together.

As Mayor, I will work collaboratively with my fellow Council members to strengthen fiscal responsibility, provide strong budget oversight, restore long-term budget stability, protect our open space, support public safety, encourage innovation, and give residents the opportunity to vote on the future of our open space.

As a husband and father, I want Irvine to remain one of the safest and best places to live, work, and raise a family by protecting our quality of life, planning responsibly, and improving mobility throughout our city.

I will lead with integrity and be a Mayor for all of Irvine.
