BRANDON COUNCIL **AGE: 33**
Mechanical Engineer

As an R&D Mechanical Engineer and long-time community advocate, I bring a practical, data-driven approach to solving complex problems. I have spent over a decade leading cross-functional teams, managing long-term technical projects, and balancing critical budgets.

As I continue to make Lake Forest a home for myself in a fresh start, I want to join you and support you by being a voice of reason and progress on our infrastructure challenges, public safety, and smart economic development for local businesses.

I am running for City Council because I love making a difference for people. I want my professional talents focused on solving the problems that matter most, on what affects you day to day. I bring with me the tenacity for improvement and innovation but also a tactful humility that comes from working on diverse teams among talented people each with their own important contribution to make.

I've served as a high school youth leader in my local church for 5 years and I've been involved in various homeless outreach and census programs. I believe in working as a team, using critical thinking and common-sense leadership to solve the problems we're all up against.
