JENNIFER ENGLE **AGE: 38**

Utility Project Manager

I hold a degree in Mechanical Engineering from the California Maritime Academy and have worked in construction management for more than a decade. Throughout my career, I have managed projects involving water, sewer, and gas infrastructure, wind turbines, houses, apartments, and coffee shops. These projects have taught me the importance of collaboration and bringing people with different priorities together to achieve a common goal. That means listening, solving problems, balancing competing interests, and building solutions that everyone can support.

I have broad experience scheduling budgeting, and coordinating complex projects, keeping them on time, and on budget. This means managing expectations, securing commitments, communicating openly and honestly, and providing realistic forecasts. I help teams make informed decisions and deliver results.

These are the skills I want to bring to our water board.

Above all, I believe trust is the foundation of effective leadership. I follow through on my commitments, speak up when something needs to be challenged, take responsibility when things don't go as planned and don't shy away from difficult decisions or tough conversations.

You can count on me to keep our water clean, safe, reliable and affordable, not just today, but for many years to come.
