DAVID PETTY
Retired Cybersecurity Professional

I am running for the Moulton Niguel Water District Board of Directors because I believe in fiscal responsibility, transparent decision-making, and reliable public infrastructure.

For more than 25 years, I have worked in cyber operations, cybersecurity, and digital forensics, managing, leading, and mentoring teams responsible for protecting critical systems and delivering complex projects. As water infrastructure becomes increasingly connected, safeguarding critical systems from cyber threats is an important part of protecting reliable public services.

I hold a Bachelor's degree from the University of California, Irvine and a Master's degree in Cybersecurity from Fordham University in New York.

Over the past 10 years, I have also managed residential real estate, gaining practical experience in budgeting, long-term planning, and responsible stewardship.

If elected, I will work to ensure reliable, affordable water service today while planning responsibly for the District's long-term water reliability and infrastructure needs. I will focus on protecting taxpayer resources, promoting transparency, strengthening resilience, and helping ensure our water system remains dependable for future generations.

I would be honored to earn your support.
