# **Shocking results from a landmark study indicate that one fifth of the voters in the 2024 election in Orange County, California were non-citizens, invalid or phantom voters!**

---

**Results from a landmark study are available today with these shocking results.**

Analysts in a landmark study used multiple trusted skip tracing and identity verification databases to come to this conclusion. A significant number of voters in Orange County in the 2024 election are likely non-citizens, invalid voters and/or simply do not exist at all.

State officials have a legal duty under Federal law to verify every voter's citizenship and eligibility before registering them or counting any vote. Yet this evidently is not happening in Orange County. According to US Department of Justice guidance on prosecution of election crimes, allowing non-citizens to vote is textbook suspected election fraud.

This study exposes a national security disaster in the Orange County 2024 election, in which six US House seats were voted on. Joe Hoft ([JoeHoft.com](http://JoeHoft.com)) and Marly Hornik and Harry Haury ([United Sovereign Americans](http://UnitedSovereignAmericans.com) (USA)), and volunteers from USA, collaborated in a study using the USA copywritten process for doing deep analysis of legally valid voter records.

A random sample of 609 voter records from a population of 1.4 million voters in the 2024 election was generated based on a 90% confidence interval, a precision of 0.02 and a predicted prevalence of  $P = 0.1$ . The population was obtained from voter history files requested from Orange County and state entities.

When extrapolating the sample results to the population of vote records in the 2024 Election, the following was exposed:

- 74,000 voters were non-citizens, or totally fake—they don't exist in our multiple database review
- 86,000 voters did not live at the address they reportedly voted from
- 61,000 don't have a Social Security number or their SSN is shared with others , and
- 77,000 ballots counted cannot be reconciled with any voter who voted

When election officials count votes from unverified or ineligible individuals, non-citizens, and fictitious voters in congressional elections, it is a federal crime. Before any ballot can be legally counted, the official has to be certain it is legitimate. Before any election can be certified, the number of lawful votes counted must equal the number of lawful voters who voted. Outcomes must be provable using official records.

**In total, an estimated 298,000 votes were illegally counted without verification. This is 21% of the vote, or just over one in five ballots counted. Six US House seats are now caught in a massive election scandal involving Orange County and California State**

## **officials who clearly certified fraudulent election results.**

Professionals and experts in accounting, programming, cybersecurity and elections conducted the analysis using official state and county records received from their custodians. A private investigative firm assisted, producing law enforcement compliant evidence of massive election misconduct.

We believe that the solution to these findings is for the United States Department of Justice to immediately open a formal investigation of this matter and prosecute those responsible. The potentially illicit House members must be removed and their elections readministered, as a matter of national sovereignty.

*([USA](#) has additional evidence of these crimes in other locations, also requiring immediate DOJ review.)*

***When do we stop the madness? Are 300,000 invalid votes out of 1.4 million enough? How many more illegitimate elections are we going to see before we address the real problems?***

### **More on Orange County's 2024 Election:**

Orange County is the [sixth largest county in the US](#) by population and had over [1.8 million individuals](#) in its voter rolls for the 2024 Election. Six US House seats were voted on in the 2024 election in the county. Although the region is considered conservative, [five of these House seats](#) were awarded to the Democrat candidates. One of these races was [awarded to the Democrat candidate](#) weeks after the election.

Over [2.1 million ballots](#) were issued to voters in the 2024 election. Each voter in the county was sent a ballot in the mail and over 300,000 ballots were issued to voters a second time. [California](#), including Orange county, has drop boxes and allows ballot harvesting. The state has made it illegal to request an ID to validate voters and [prevents reasonable questions from observers](#) during election counting due to laws implemented by the state.

In Orange County the election went on for months with ballots sent out before the election and final counts concluding after the election. In addition, a [bomb threat](#) was reported the Friday evening after the election at the Orange County counting center. To date the individual(s) responsible for the bomb threat have not been identified nor charged with any crimes.

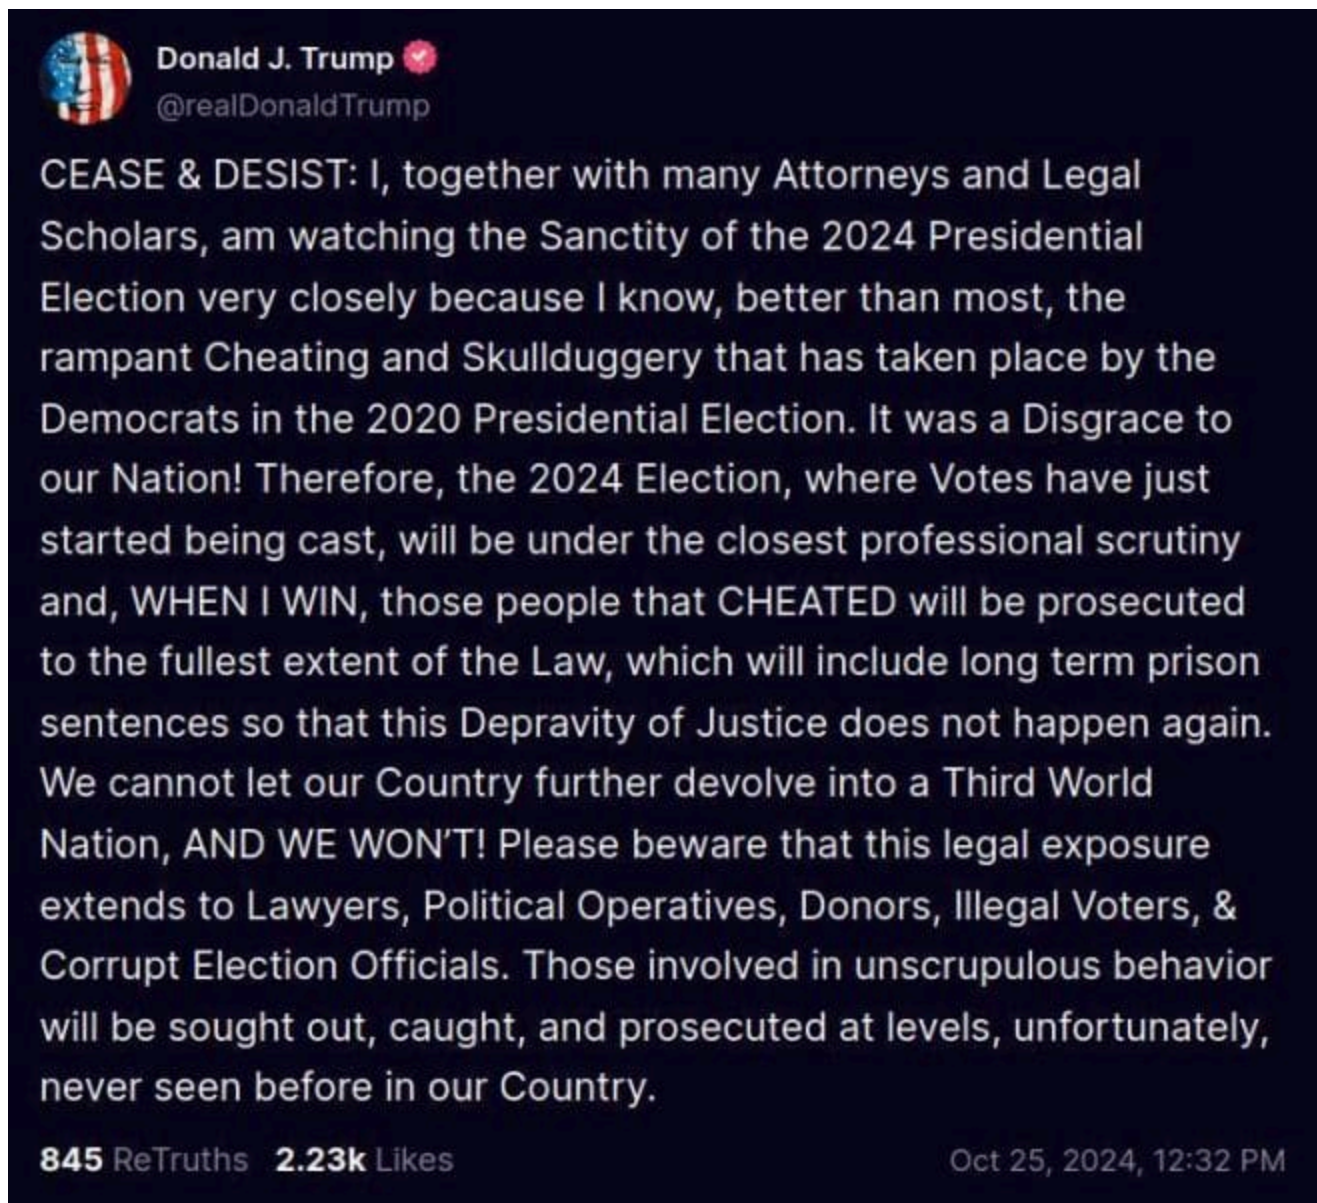

Before the 2024 Election in California took place, it was reported that nearly a fifth of all voters in the California voter rolls were non-citizens. [One study estimated](#) that 3.8 million records in California's voter rolls are non-citizens. With 22.6 million registered voters in the state, this is 17% of registered voters.

After the 2024 election a request was made to perform a limited-scope audit of the results of the election, but the [response from the county](#) indicated that any effort to perform an audit, limited as it may be, was not something the county was anxious to have performed.

**These results indicate that likely no results in Orange County and in the entire state of California could legitimately have been certified in the 2024 election.**
